Prattville Ala.

July 12, 1864

Dear Friend Mr. Watson

I send you the flowers that you were to send and hope that it may prove interesting to you. I have made a small collection of birds, including my own specimens the Cardinal and send you extra labels to write the names on for me.

The Sanguinea and Cardinalis were sent before you gave it as S. Glaucus. Is it? The fruit looks so different I sent only flowers before

4 birds
4.24.20
4.62.10

you desired fruit.
Specimens of Erodium
(Geraniaceae)
I can make out the
order and Genera of
all the others, but this
one, must be a Pelar-
onium, allied to that
Genera I collected
last near the snow
line on Lassens Peak
Aug. 8. at an elevation
of between 9,000 and
10,000 feet. It is a
pretty, little plant
growing in masses on
the stony side of
rocks, where there is
some low-kept moist
by the melting snow.
All the other plants
with the exception of
X. were gathered on

and around Lassens
Peak.
This one is known in
hills near Round Valley
Plumas Co.
b. looks so different from
the other. [illegible]
